

Double Your Internet Speed

starting at only \$99/month

Increased Reliability, Faster Web Downloads, No More Headaches

ZERO

Network Changes

Transparent to your existing network connections means this service requires no network changes, just plug it in.

BALANCED

ISP Connections

This service works in conjunction with your existing Internet connection to increase web download speeds.

AVAILABLE

Server Applications

Customers with onsite servers can realize 99.999% uptime. Even in the event of a major ISP outage.

Why WTI Communications?

Unbeatable Price v Performance

No other service on the market today provides WTI's capabilities.

The Market Leader

We were the first to offer high-speed broadband redundancy solutions for small and medium-sized businesses.

Commitment to Excellence

With over seven years of experience, we know how to deliver network reliability.

How Do WTI's Solutions Work?

WTI is unique in how it delivers its Internet redundancy and load balancing services. Our transparent switching technology is placed between your existing LAN network and your primary Internet link. The installation is 100% transparent to the existing infrastructure so in most cases no changes are required.

What's Included?

Broadband Management: When our service is used in combination with our partners Internet connectivity we are able to deliver to our customers with more bandwidth, faster responsiveness, and 99.999% redundancy.

Switching Technology: WTI communications will provide a switching device which automatically detects any outage and connects to our NOC systems to redirect traffic as needed. This switch is fully managed by WTI and can also be used to load balance traffic between the two (or three) connections.

24/7 Monitoring: With every WTI deployment, we also provide 24/7 network monitoring by our dedicated network operations center. If an outage occurs we will notify the network administrator and provide an outage report.
